GARAGES & WORKSHOPS

A timber workshop or garage allows you to use your garden space to it's maximum potential.

Apart from the natural beauty of wood and the fact that it is a sustainable building product, timber also possesses several practical features when using it as a working space or for storage.

Timber is naturally resistant to condensation, unlike concrete garages, and offers significantly better insulation properties. It is also very flexible when it comes to the fitting of shelves and other storage.

Therefore making it perfect for garages and workshops.
